Professional Summary

Cybersecurity-focused Computer Science graduate (2026) with project experience in vulnerability assessment and penetration testing (VAPT), SIEM detection engineering, threat detection, log analysis, and Python security automation. Familiar with reconnaissance, enumeration, exploitation, and privilege escalation in lab environments; experienced with Splunk, ELK Stack, Burp Suite, Wireshark, Nmap, Zeek, Suricata, Metasploit, VirusTotal, and Shodan.

Technical Skills

Cybersecurity: Vulnerability Assessment and Penetration Testing (VAPT), OWASP Top 10, PTES, Detection Engineering, Threat Detection, Log Analysis, Network Defense, Reconnaissance, Enumeration, Exploitation, Privilege Escalation, Cloud and Network Security
SIEM and Security Tools: Splunk (SPL), ELK Stack, Burp Suite, Nmap, Wireshark, Metasploit, Hydra, Shodan, VirusTotal
Programming and Development: Python, Django, FastAPI, Flask, Bash, SQL, Linux

Projects

Port Scan Detection Engineering Lab GitHub
Tools: Splunk, ELK Stack, Nmap, Python, Zeek, Suricata

- Developed SIEM detection rules for SYN, FIN, NULL, and XMAS port-scanning techniques.
- Simulated reconnaissance with Nmap and validated detections against structured attack scenarios.
- Built monitoring dashboards in Splunk and ELK Stack to visualize reconnaissance activity and detection events.

SSH Intrusion Detection System (IDS) GitHub
Tools: Python, Linux auth.log, regular expressions, Splunk HEC, ELK Stack

- Built a Python-based detector for SSH brute-force attempts by analyzing Linux authentication logs.
- Implemented threshold-based detection using rolling time windows and forwarded alerts to Splunk and ELK Stack for centralized monitoring.

SafeGuard-Web-Protector GitHub
Tools: Python, FastAPI, Flask, Next.js, PostgreSQL, VirusTotal API, Google Safe Browsing

- Trained and optimized a Random Forest model on 500,000+ URLs, reporting 98.6% accuracy with minimal false positives in testing.
- Integrated Google Safe Browsing and VirusTotal APIs for URL intelligence and cross-validation; developed real-time malicious URL classification and blocking with a browser extension.

Experience

Cybersecurity Intern **Jul 2025 – Aug 2025**
ShadowFox

- Completed a guided penetration test of the TryHackMe Basic Pentesting lab, following reconnaissance, enumeration, vulnerability scanning, exploitation, and privilege-escalation stages aligned with OWASP and PTES concepts.
- Used Nmap, Hydra, enum4linux, SMB tools, SSH brute-force techniques, and Linux privilege-escalation scripts in the lab environment.
- Achieved user-level access and root-level privilege escalation in the lab, then documented attack paths, evidence, technical impact, and recommended mitigations.

Research Publication

Real-Time Malicious URL and Inappropriate Content Blocking System Sep 29, 2025
International Research Journal of Modernization in Engineering, Technology and Science (IRJMETS)

- Published research proposing an ML-driven web threat-prevention framework using a Random Forest model and threat-detection APIs; reported 98.2% detection accuracy.
- Read publication

Education

Bangalore Technological Institute 2022 – 2026
B.Tech. in Computer Science and Engineering CGPA: 8.74
Bangalore, India

Certifications

- Penetration Testing and Ethical Hacking – LinkedIn Learning
- Kali Linux for Advanced Pen Testing and Ethical Hacking – LinkedIn Learning
- Splunk for Security Analytics and Monitoring – LinkedIn Learning
- Introduction to the MITRE ATT&CK Framework – LinkedIn Learning
- Network Traffic Analysis for Incident Response – LinkedIn Learning / Infosec
- Google Cloud Cybersecurity Certificate – Coursera
